

TECH TRENDS '09

Today's Homes and Appliances Are Built Smart.

Here are some ways you can integrate new technology into your home so you can both relax and increase its value.

- **Choose the Right Size.**
When you choose the appliance that fits your needs, you'll save money & reduce your energy bill.
- **Choose Natural Gas.**
Look for dryers and water heaters that run on natural gas, rather than electricity.
- **Think Long Term.**
The long-term savings will offset the initial purchase price & pay for themselves in time.

The Future: Whole-House Remote Control.

With home automation, the ability to control every aspect of your home—from lighting and room temperature to entertainment center—can be held in your hand in the form of a single centralized controller.

Be Smart. Save Energy and Money with Efficient Appliances.

Cut your monthly bills while helping the environment by purchasing appliances that are energy efficient.

Look for the ENERGY STAR® Label.

ENERGY STAR products exceed the minimum energy efficient requirements set by the federal government and often earn you rebates from state governments and utility companies.

Oh, by the way®... I'm never too busy for your referrals.
