Home Winterization Tips

- Block drafty entryways with proper weather stripping and draft snakes. Consider a storm door.
- Caulk around windows to prevent cold air from seeping in.
- Adjust the direction of ceiling fans; clockwise rotation produces warmer air.
- Have additional insulation installed if needed; it will protect against ice dams.
- Drain hose bibs, sprinklers, and pool equipment.
- Replace furnace air filters and consider having your unit serviced.
- Have your chimney checked and serviced once per year.
- Remove dead tree limbs and branches that could come down in winter storms.
- Make sure you have a shovel and ice melt on hand.
- Clean your gutters after all the trees near your home have dropped their leaves.
